

TEZPUR UNIVERSITY COMPUTER SOCIETY WEBSITE DEVELOPMENT

ABSTRACT

The Tezpur University Computer Society does not have a website currently. There is just a single page integrated to the Computer Science Engineering department website of Tezpur University. The aim of our project is to build a dedicated interactive platform for the people of the Computer Science Engineering department because there is no interaction between the alumni and the students via a social platform. This will give us a big upgrade over the existing Tezpur University Computer Society webpage. Each person in the department will have their own account like any social platform which can be categorised here as students, faculties and alumni along with other users for administrative tasks like moderators. There is a community section categorised for different domains like ML or OS, with a sole purpose of connecting people with their respected interested domains and building a community around them. To measure the quality of interaction we have made few benchmarks like upvotes, downvotes and a reporting system. There are other features such as blogs where one can create blogs, events notification from the department, project section, messenger for exclusive interaction and notification for any of the features given. Students can showcase their projects to alumni and ask for their reviews. This platform will reduce the interaction gap between the alumni, students and teachers and create a bond between them, which will last beyond the academic period.
